## ← Homework for Module 3 Part 1

Quiz, 9 questions

1 point

1.

(Difficulty:  $\star$ ) Write out the phase of the complex numbers  $a_1=1-{
m j}$  and  $a_2=-1-{
m j}$ .

Express the phase in degrees and separate the two phases by a single white space. Each phase should be a number in the range [-180, 180].

2

(Difficulty:  $\star$ ) Let  $W_N^k=e^{-\mathrm{j} \frac{2\pi}{N} \frac{k}{N}}$  and N>1. Then  $W_N^{N/2}$  is equal to...

- -
- \_
- $e^{-\mathrm{j}(2\pi/N)+N}$

3.

(Difficulty: \*) Which of the following signals (continuous- and discrete-time) are periodic signals?

Note that  $t \in \mathbb{R}$  and  $n \in \mathbb{Z}$ .

- x(t) = t floor(t).
- $\boxed{ \qquad } x[n] = (-1)^n.$
- $x(t) = (t + 2\pi)^2.$
- $x(t)=\cos(2\pi f_0 t + \phi)$  with  $f_0\in\mathbb{R}.$

4.

(Difficulty:  $\star\star\star$ ) Choose the correct statements from the choices below.

- Consider the length-N signal  $x[n]=(-1)^n$  with N odd. Then X[k]=0 for all k except k=N/2
- If we apply the DFT twice to a signal x[n], we obtain the time reversed signal, i.e. x[N-n].
- Consider the length-N signal  $x[n] = \cos(\frac{2\pi}{N}Ln + \phi)$  where L is an integer and  $L \neq N/2$ . Then  $X[k] = \begin{cases} \frac{N}{2}e^{j\phi} & \text{for } k = L \\ \frac{N}{2}e^{-j\phi} & \text{for } k = N L \\ 0 & \text{otherwise} \end{cases}$

5.

(Difficulty:  $\star$ ) Consider the Fourier basis  $\{\mathbf{w}^k\}_{k=0,\ldots,N-1}$ , where  $\mathbf{w}^k[n]=e^{-j\frac{2\pi}{N}nk}$  for  $0\leq n\leq N-1$ .

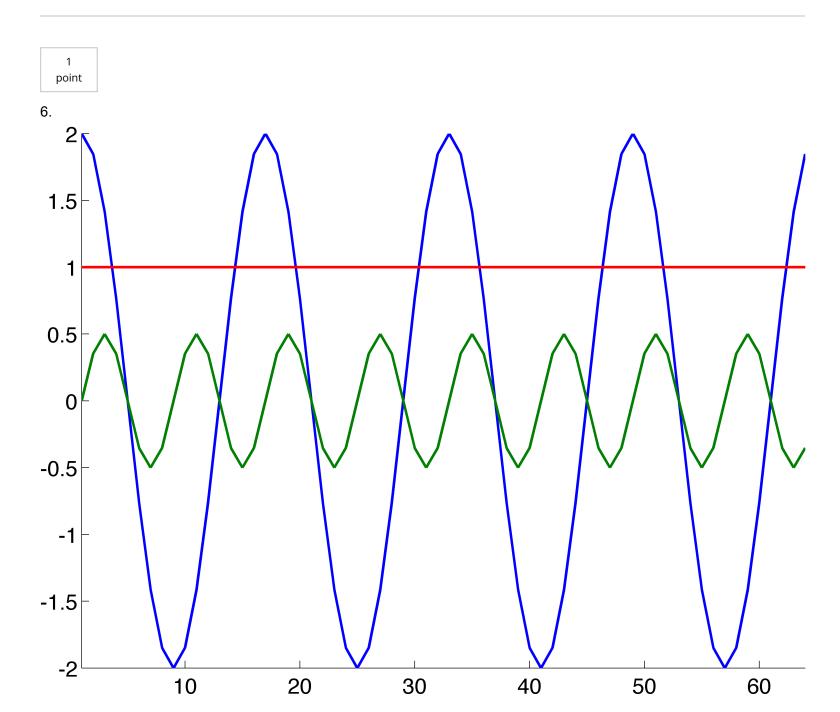

Select the correct statement below.

The orthogonality of the vectors depends on the length N of the elements of the basis.

The elements of the basis are orthonormal:

The elements of the basis are orthogonal:

$$\langle \mathbf{w}^i, \mathbf{w}^j 
angle = egin{cases} N & ext{for } i=j \ 0 & ext{otherwise.} \end{cases}$$

(Difficulty:  $\star\star$ ) Consider the three sinusoids of length N=64 as illustrated in the above figure; note that the signal values are shown from n=0 to n=63.

Call  $y_1[n]$  the blue signal,  $y_2[n]$  the green and  $y_3[n]$  the red. Further, define  $x[n]=y_1[n]+y_2[n]+y_3[n]$ .

Choose the correct statements from the list below. Note that the capital letters indicate the DFT vectors.

$$Y_3[k] = egin{cases} 32 & ext{for } k=0 \ 32 & ext{for } k=64 \ 0 & ext{otherwise} \end{cases}$$

$$Y_1[k] = egin{cases} 64 & ext{ for } k=4,60 \ 0 & ext{ otherwise} \end{cases}$$

$$Y_2[k] = egin{cases} -16j & ext{for } k=8 \ 16j & ext{for } k=56 \ 0 & ext{otherwise} \end{cases}$$

$$\Vert x \Vert_2^2 = 200$$
 and  $\Vert X \Vert_2^2 = 12800$

7.

(Difficulty:  $\star\star\star$ ) Consider the length-N signal

$\leftarrow x[n]$ Hemew	brk for	Module 3	Part 1
$-x_{ n } = 6081/2$	<del>yan ivi</del>	module 5	<del>- 1 a. t. 1</del>

Quiz, 9 questions where M and L are integer parameter with  $0 < L \leq N-1$  ,  $0 < M \leq N$  .

Choose the correct statements among the choices below.

- In general, it will be easier to compute the norm of the signal  $\|\mathbf{x}\|_2$  in the Fourier domain, using the Parseval's Identity.
- Consider the circularly shifted signal  $y[n]=x[(n-D)\mod N]$ . In the Fourier domain, the two DFTs related by a modulation factor:  $Y[k]=X[k]e^{-j2\pi k\frac{D}{N}}$ .
- lacksquare If M=N and 2L < N, the signal has exactly L periods for  $0 \le n < N$
- The DFT X[k] has two elements different from zero if N=M and N 
  eq 2L.

(Difficulty:  $\star$ ) Consider an orthogonal basis  $\{\phi_i\}_{i=0,\dots,N-1}$  for  $\mathbb{R}^N$ . Select the statements that hold for any vector  $\mathbf{x}\in\mathbb{R}^N$ .

- $\|\mathbf{x}\|_2^2 = \sum_{i=0}^{N-1} |\langle x, \phi_i 
  angle|^2.$
- $\|\mathbf{x}\|_2^2 = rac{1}{P} \sum_{i=0}^{N-1} |\langle x, \phi_i 
  angle|^2 ext{ if and only if } \|\phi_i\|_2^2 = P \ orall i.$
- $\|\mathbf{x}\|_2^2 = rac{1}{P} \sum_{i=0}^{N-1} |\langle x, \phi_i 
  angle|^2$

if and only if  $\|\phi_i\|_2 = P \ \forall i.$ 

 $\|\mathbf{x}\|_2^2 = \sum_{i=0}^{N-1} |\langle x, \phi_i 
angle|^2$  if and only if  $\|\phi_i\|_2 = 1 \ orall i.$

9

(Difficulty:  $\star\star$ ) Pick the correct sentence(s) among the following ones regarding the DFT  $\mathbf X$  of a signal  $\mathbf x$  of length N, where N is odd.

Remember the following definitions for an arbitrary signal (asterisk denotes conjugation):

hermitian-symmetry: x[0] real and  $x[n] = x[N-n]^*$  for  $n=1,\ldots,N-1$ .

hermitian-antisymmetry: x[0]=0 and  $x[n]=-x[N-n]^*$  for  $n=1,\dots,N-1$ .

- If the signal  ${f x}$  is hermitian-symmetric, then the DFT  ${f X}$  is also hermitian-symmetric.
- If the signal  ${f x}$  is purely real, then the DFT  ${f X}$  is purely imaginary.
- If the signal  ${f x}$  is hermitian-symmetric, then its DFT is real.
- If the signal  ${f x}$  is hermitian antisymmetric, then its DFT  ${f X}$  is purely imaginary.
